

Abstract

Recording and reproducing an MPEG information signal on/from a record carrier,

During recording of an MPEG information signal on a record carrier (40), transport packets ( $P_k$ ) are stored in signal blocks in a track (1) on the record carrier (40).  $x$  transport packets of the MPEG information signal are stored in the second block sections (SB) of  $y$  signal blocks, where  $x$  and  $y$  are integers,  $x \geq 1$  and  $y > 1$ , more specifically,  $y > x$ .

5 Further, third block sections (TB) are present in one or more of the second block sections in the  $y$  signal blocks of a group for storing additional information, which additional information relates to the specific application of recording and reproducing the MPEG information signal on/from the record carrier.
